                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0;
```

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ17779. Also described is a method of detecting differentially expressed genes correlated with the

expressed genes correlated wit comprising detecting at least

with the

cancerous state

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC differentially expressed gene product in a test sample from a cell CC suspected of being cancerous, where the gene product is encoded by one CC of the 5248 polynucleotide sequences given in ARZ12532 to ARZ17779. The CC polynucleotides can be used as a source of primers and probes, which can CC mapping, tissue typing or profiling, forensics, genetic analysis and CC detection of polymorphisms. Polypeptides encoded by the polynucleotides CC can be used for raising antibodies for experimental, diagnostic and CC therapeutic purposes. The polynucleotides may also be used to construct CC arrays for diagnostics (which may be used to determine function of an CC encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to CC identify a genetic predisposition or susceptibility to a disease such as CC cancer). The polynucleotides of the invention are especially used in the CC diagnosis, prognosis and management of colorectal cancer, breast cancer, CC cancer. The polynucleotides can also be used to screen for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC protein tyrosine phosphatase, trypsin, whit family of developmental CC signalling proteins and WW/rsp5/WWP domain containing proteins. The CC encoded polypeptides also have a functional domain selected from Ank CC repeat, basic region plus leucine zipper transcription factors, bromodomain, EF-hand, SH3 domain, WD domain/G-beta repeats, zinc finger (CCHC class), and zinc-binding metalloprotease commain. The polynucleotides encode polypeptides with similarity to known protein families and are predicted to have similar properties. The novel polynucleotides can be used to develop products for use as therapeutic cagents and in forensics, genetic analysis, mapping and diagnostic capents and in forensics, spentic analysis, mapping and diagnostic cancers, melanomas, colorectal adenocarcinomas, Wilm's tumour, sarcomas, convectinoblastoma, myosarcomas, lung carcinomas, Wilm's tumour, sarcomas, retinoblastoma, myosarcomas, lung carcinomas, leukemias, such as chronic myelogenous leukemia, and lymphomas such as histiocytic leukemia, and compenital dysplasia, congenital alveolar dysplasia, breach control of the cervix, fibrous dysplasia of bone, and breach condenses and control of the cervix, fibrous dysplasia of bone, and breach condenses are condensed to the cervix.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel isolated human polynucleotides obtained by screening for differential expression in colon cancer, breast cancer and lung cancer cell lines. The polynucleotides of the invention are represented in AAX98275-X99118 and encode polypeptides of protein families selected from 4 transmembrane segments integral membrane proteins, 7 transmembrane receptors, ATPases associated with various cellular activities (AAA), eukaryotic aspartyl proteases, GATA family of transcription factors, G-protein alpha subunit, phorbolesters or diaryiglycerol binding proteins, protein kinase, protein phosphatase 2C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Jones LW, Kassam A, Kennedy GC, Kita D, Labat

disorders e.g. cerebral ischemia, angiogenesis, nervous system disorders e.g. cerebral ischemia, angiogenesis, nervous system disorders e.g. y. conneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides are used to modulate mammalian metabolism, to change mammal's mental state or physical state by influencing biorlythms circadian rhythms, depression tendency for violence tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, libido, memory, stress or other increase or decrease storage capabilities, fat content, lipid, protein, camponare, vitamins, minerals, cofactors or other nutritional

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and the sequence of th
                                                                             1030
                                                                                                                                                                                                                                                                                                                                                                                                                           anti-Listeria vaccines.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New genomic sequences from Listeria species, useful treatment and prevention of infection, also related antibodies and modulators -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Б
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 26
                                                  promoter. Transformants were selected and their progeny screened for hygromycin resistance. The mutant phenotype (hygromycin resistance) was screened for genetic co-segragation with a specific T-DNA insert. Cloning of the tagged gene allowed characterization of the present sequence. 2 Allelic differences were found in the corresponding gene of A. thaliana ecotype Columbia (see AAA89385).
                                                                                                                                        hydrogrmycin resistance gene (hyg). Mutation of a silencing modified locus results in release of silencing of the hyg gene and restores hygromycin resistance. Plants homozygous for the silent resistance gene were subjected to transformation with a bar selectable marker gene under control of the T-DNA 1'-2' dual
                                                                                                                                                                                                               The present sequence is that of Arabidopsis thaliana ecotype Zurich epigenetic silencing gene MOM cDNA clone. It encodes a 2001-amino acid protein (see AAB20062) with similarity with ATPase/helicase proteins of the SWIZ/SNF2 family, which controls gene silencing, particularly plant gene silencing. Trans-acting modified loci were identified by T-DNA insertion mutagenesis using Arabidopsis thaliana ecotype Zurich, which carries a heritable inactivated, methylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (NOVS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS

Plasmids that contain the phage resistance mechanism nucleic acids are used to impart phage resistance to industrially important strains of lactic acid bacteria. These recombinant strains are then used for preparation of cheese, yogurt, butter, sauces and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                                                                                     The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, theumatoid arthritis, psoriasis and inflammatory/ulcerative bowel

                                                                                                                                                                                                                                    The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (INSP)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                311774
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              311714
                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for the transfer of the sequences and are useful as immunogens in the sequences.
                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                      CC The invention relates to a spatially-addressable set of single exon CC nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting CC the probes with a collection of detectably labelled nucleic acids counted to each probe of the microarray. The probes are useful for CC derived from mRNA of human breast, and then measuring the label CC centrying the expression of regions of genomic DNA predicted to centrying the expression of regions of genomic DNA predicted to centrying predisposition and/or prognosing breast disease. Gene CC expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly considered the constraints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       402098
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    402038
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-FEB-2000;

                                                                                            measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention
                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                         The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human liver. The single exon nucleic acid probes may be used for precipitation.
                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format dir
                                                                                                                                                                                                                                                           Claim
                                                                                                                                                                                                                                                                                                     analyzing

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derive from the human heart via microarrays. By measuring gene expression, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; gene expression; heart; microarray; vascular system;

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cances such as lymphoma, leukaemia and myeloma. The present sequence is one of the invention.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

```
CC isolated from Bacillus cells to a Substrate Containing array of Bacillus CC genomic sequenced tags (GST), examining the array, and determining CC relative gene expression by an observed hybridisation reporter signal of CC a spot in the array. The method is useful for measuring the expression of CC genes in a first Bacillus cell relative to expression of the same genes CC in one or more second Bacillus cells. The method is useful for monitoring CC global expression of several genes from a Bacillus cell, discovering new CC genes, identifying possible functions of unknown open reading frames and CC monitoring gene copy number variation and stability. Monitoring changes CC in expression of genes may be used to provide a representation of the way CC environmental stress or other physiological provocation. Extensive CC collow-up characterisation is unnecessary, when one spot on an array cequals one gene or one open reading frame, since sequence information is contained the contained t
                                                                                                                                               genes in a first Bacillus cell relative to expression of the genes other Bacillus cells, comprising hybridising labelled nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 11; SEQ ID NO 5151; 200pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy of HTV infection, neurodegenerative disorders, graft-versus-host disease, aging, glomerular disease, Lewy body disease, arthritis, arteriosclerosis, solid tumours and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABK28281;

The set of oligomer probes are useful for detecting the CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs) of a chemically pretreated genomic DNA. The nucleic acids are useful for diagnosing or treating diseases associated with DNA transcription CC diagnosing or treating diseases associated with DNA transcription CC (particularly with the methylation status), e.g. adenosine deaminase certain disorders, immunological disorders, Werner syndrome, CC thaematological disorders, immunological disorders, Werner syndrome, CC thaematological disorders, neurodegenerative disorders, Waardenburg CC syndrome, Niemann-pick disease, myelodysplastic syndrome, myocardial crifarction, hypertension, angiogenesis, erythropotesis, congenital heart CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours or cancer. Sequences ABK28127-ABK28472 represent DNA transcription CC specification but was obtained in electronic format directly from the CC European Dataer of fetiar.

                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                        CC AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon CC cancer-associated nucleic acid molecules (N) and proteins (P), where CC the proteins are collectively known as colon cancer antigens. The colon CC cancer antigens have cytostatic activity and can be used in gene CC diagnosis and treatment of diseases associated with inappropriate P CC expression. For example, N and P may be used to treat disorders CC in a patient's genome that affect the activity of P by expressing CC in a patient's genome that affect the activity of P by expressing CC inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, Dy inserting the nucleic acids into a host cell and culturing the cell CC by inserting the proteins and P and P can be used in the prevention, diagnosis and AAB77789 represent sequences used in the exemplification of the creament invantion.

Sequence 5, Application US/09323427

Sequence 5, Application US/09323427

Patent No. 6248329

GENERAL INFORMATION:

APPLICANT: Chandrashekar, Ramaswamy

APPLICANT: Morales, Tony H.

TITLE OF INVENTION: Parasitic Helminth Cuticlin Profittle OF INVENTION: Molecules, and Uses Thereof

FILE REFERENCE: HW-8

CURRENT APPLICATION NUMBER: US/09/323,427

CURRENT FILING DATE: 1999-06-01

EARLIER APPLICATION NUMBER: 60/087,435
                                                                   RESULT 2
US-09-323-427-5/c
                                                                                           B 8

; Sequence 7, Application US/09812642
; Patent No. 6368600
; GENERAL INFORMATION:
APPLICANT: Chandrashekar, Ramaswamy
APPLICANT: Morales, Tony H.
TITLE OF INVENTION: Parasitic Helminth Cuticlin Proteins, Nuc
TITLE OF INVENTION: Molecules, and Uses Thereof
FILE REFERENCE: HW-8
CURRENT APPLICATION NUMBER: US/99/812,642
; CURRENT FILING DATE: 2001-03-20
; PRIOR APPLICATION NUMBER: 09/323,427
; PRIOR APPLICATION NUMBER: 09/323,427
; PRIOR FILING DATE: 1999-06-01
; NUMBER OF SEQ ID NOS: 18
; SOFTWARE: Patentin Ver. 2.0
; SEQ ID NO 7
                                                                                                                                                                                                         RESULT 12
US-09-812-642-7/c
                                                                                                                                                                                                                                                   맒
                                                                                                                                                                                                                                                                      δõ
                                                                                                                                                                                                                                                                                          멍
                                                                                                                                                                                                                                                                                                          γQ
